Patent No. 6376225
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN PHOSPHODIESTERASE
TITLE OF INVENTION: PROTEINS, NUCLEIC ACID MOLECULES ENCODING HUM
TITLE OF INVENTION: PROSPHODIESTERASE PROTEINS, AND USES THEREOF
FILE REFERENCE: CLO01063
CURRENT APPLICATION NUMBER: US/09/754,250
CURRENT PILING DATE: 2001-01-05
NUMBER OF SEQ ID NOS: 5
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB 4; Length 111282;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

      The invention relates to a new isolated prostate-specific nucleic acid

(PSNA) molecule comprising the cDNA sequences appearing as ABR87574.

ABG68701-ABG68746, or a sequence hybridising to a PSNA or which has 60% sequence homology with a PSNA. Also included are a method of determining the presence of a PSNA in a sample, a vector comprising the PSNA, a method of determining the prosence of a PSNA in a sample, a vector comprising the PSNA, a method of determining the presence of a PSNA, a method of determining the presence of a PSNA, a method of determining the presence of a PSNA, a method of determining the presence of a PSNA, a method of determining the presence of a PSNA, a method of determining the presence of a PSNA, a method of determining the presence of diagnosing and monitoring the presence of a PSNA, a patient (the kit comprising a means for determining the presence of the PSNA or PSN in a sample of a patient) and a vaccine comprising the polypeptide. The PSNA, PSNA on and anti-PSP antibody are useful for diagnosing and treating cancer in a patient (e.g. by gene therapy). The nucleic acid molecule and polypeptide are also useful as vaccines for treating cancer, particularly prostate and pSNA of the invantion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        5286 TITITITGAGATGGAGTITTGGTCTTGTTGCCCATGCTGGAGTGGAATGGCATGAYCAT 5345

The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, rypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal heemoglobinuria, antiinfilammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary;

The present sequence is human c-myb-related protein. The c-myb gene is a proto-oncogene which codes for a nuclear protein expressed primarily in haematopoietic cells. c-myb-related proteins are useful for screening agents which regulate their activity. Human c-myb-related genes can be regulated to prevent or treat diseases of the haematopoietic system such as anaemias including megaloblastic, normochromic and normocytic anaemia, haemolytic disorder, thalassaemia and haemoglobinopathies. Reagents that modulate the activity of c-myb-related protein is useful for treating c-myb-related protein associated disorders. Human c-myb-related gene is also useful in diagnostic assays for detecting diseases and abnormalities related to presence of mutations in the nucleic acid sequences which encode a c-myb-related polypeptide. They are also useful in antisense therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polynucleotide encoding human c-myb-related polypeptide, for identifying reagents which modulate activity of c-myb-related polypeptide in hematopoietic diseases such as anemia and aplastic

polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymiclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques for identifying expressed genes. (I) is useful in gene therapy techniques considered normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving and its binding partibed as against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical consorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in the polypeptide and polymucleotide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and camino acid sequences of the invention.

Comparison of agreement of data for this parent did not appear in the printed and product. Specification, but was obtained in electronic format directly from WIPO construction of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5306
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5366

                                                                                                                                                                  2
                                                                                                                                                                                                                                                                                                                                                                                                  polymetrase chain reaction (FRS) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polymetrase chain reaction (FRS) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymetrase are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) as useful for generating antibodies against it, detecting or a food supplement. (II) and its binding partners are useful in medical magning of sites expressing (II). (I) and (II) are useful for treating a solventide and polymerclectide sequences have applications in disorders involving aberrant protein expression or biological activity. The polypeptide and polymerclectide sequences have applications in disorders involving aberrant protein expression or biological activity. The polypeptide and polymerclectide sequences have applications in disorders of other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and cand sequences. ABGOOLO-BASION77 represent novel human cald sequences and for him parent directly from WIPO to the invitor int/pub/published_pct_sequences.

```
The invention relates to novel genes (ABA07454-ABA08224) and proteins (ABB10743-ABB10980) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are asolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune chisorders, autoimmune thyroiditis; diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid atthritis and ulcerative collitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and parasitic infections diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           5273 TTTTTTTTTTTTTTTTTGAGATGGAGTTTTGGTCTTGTTGCCCATGCTGGAGTGGA 5332

polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are useful for identifying agents (agonists and antaqonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and the proteins are useful in genetic vaccination, testing and the proteins concrease stem cell proliferation; to regulate haematopoiesis; and in increase stem cell proliferation; to regulate haematopoiesis; and in immune suppression and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemlas. AAU25510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5334 TGGCATGAYCATAGCTCACTGCAACCTCCACTCCTGGGTTCAAGCAAAGCTGTCGCCTC 5393

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated nucleic acid molecule encoding a reproductive system antige

Such conditions include ovarian cancer and breast cancer, and metastatic tunnours of ovarian or breast origin, reproductive system clisorders (e.g., infertility, disorders origin, reproductive system disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic opolycystic ovary syndrome, ovarian cysts, and dysmenorrhoea), endocrine clisorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and vagintis), immune disorders (e.g., congenital and acquired immunodeficiencies, autoimmune oophoritis, systemic lupus erythematosus), crepiratory disorders (e.g., anaemia), cardiovascular disorders.

Colond-related disorders, ourcloqical disorders, gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and conditions may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may also gene therapy, chromosome mapping, in the individuals and in forensic analysis, and the polynucleotides may be used as food additives or to prepare antibodies cuseful in disease diagnosis, drug targeting and phenotyping. The present

The invention relates to novel human secreted polypeptides. The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically from proteins are useful in genetic vaccination, testing and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; in treatment of leukaemias. AAU39510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5274 TITITITITITITITITITGAGAIGGAGTTTIGGTCTIGTTCCCAIGCTGGAGTGGA 5333
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5394 AGCCTCCCGGGTAGATGGGATTACAGGCGCCCACCACCACACTCGGCTAATGTTTGTATT 5453

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08255-ABA09574 represent nucleic acids encoding them. The sequences ABA08255-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides. C antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which in the polypeptides of the invention. Although novel, many of the properties in the invention. Although novel, many of the giving an insight into their probable biological activities, and hence of polypeptides of the invention. Although novel, many of the have various activities; including cytckine, cell proliferation or cell or prepetition activities; stem cell proving activity; immunomodulatory activity; tissue growth activity; immunomodulatory activity; acroer or inhalbin-related activities, in amy be incompleted activities; nemmodulatory activities; raceptor or inhalbin-related activities; continuous or arthritis), and inhalbin on their biological activities; polypeptides and nucleotides of conditions, e.g., by protein or gene therapy. Such conditions inschemal when a second activities in activities in a disorders (e.g., asthma or arthritis), chronic inflammatory conditions (e.g., asthma or arthritis), arterial ischemia, bene disorders (e.g., myslooid or lymphoid call capaning them) may be used in the treatment of viral, benefice or inflamous disorders (e.g., asthma or arthritis may activities may be used in the treatment of v
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention.

Included in the invention are protein sequences AAB75288 - AAB75341 which are fragments of the secreted proteins and amino acid sequences with which these fragments share homology. Examples of the activities of the proteins and polynucleotides and the activities of their agonists and antagonists include, immunosuppressive; antiarthritic; antirheumatic;
                                                         Human; Immunosuppressive; antiarthritic; antirheumatic; nootropic; antiproliferative; cytostatic; cardiant; vasotropic; cerebroprotective; neuroprotective; antibacterial; virucide; fungicide; ophalmalogical; vulnerary; autoimmune disease; hyperproliferative disorder; cancer; cardiovascular disorder; cerebrovascular disorder; infection; nervous system disorder; ocular disorder; chemotaxis; food additive; secreted protein.

notropic; neuroprotective, antibacterial; variable; fungleide; contropic; neuroprotective; antibacterial; virucide; fungleide; copthalmalogical; and vulnerary activity. The protein and polynucleotide sequences, their agonsists and antagonists may be useful for treating, preventing and diagnosing diseases and disorders such as autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral isorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral isohaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungl and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cull culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Included in the invention are oligonucleotides AAF63780 - AAF63780 and peptide AAB75239 which are used in the identification and characterisation of the DNA and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5342 YCATAGCTCACTGCAACCTCCACCTCCTGGGTTCAAGCAAAGCTGTCGCCTCAGCCTCCC 5401

                                                                                                                    A method for detecting the presence of neural thread protein (NTP) having a molecular weight of 8, 14, 17, 21, 26 or 42 kD in a human subject comprises (a) contacting a sample from a human subject that is suspected of containing the NTP with at least one molecule molecule of binding to the protein; and (b) detecting any of the molecule bound to the protein. The binding molecule is selected from an antibody free of natural impurities, a monoclonal antibody or a binding fragment of either of these. The method may be used for tumours and a malignant astrocytoma in a human.

```
polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapphing, and in recombinant production of (II). The conjuncted the reaction of (II) is useful in gene therapy techniques for far identifying expressed genes. (I) is useful in gene therapy techniques or restore normal activity of (II) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in the produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences of data and products dependent on DNA and diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5390
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5280 TTTTTTTTTTTTTTG-----AGATGGAGTTTTGGTCTTGTTGCCCCATGCTGGAGTG 5330
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           132 PhePhePhePheLeuArgArgArgThrGluSerCysSerValAlaGlnValGlyVal 151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; 5' \mathrm{EST}; expressed sequence tag; secreted protein; \mathrm{cDNA} isolation; gene therapy; \mathrm{chromosome} mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5220 TATITITCCATAGIATICAAGITIGACAAIGAICAAGIATIACTCITITITITITIT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              27
                                                                                                                                                                                                                                                                                              The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          3853 TTAATTTTTCTTCTTATTTTTTGAGGCAAGGTCTGGTCCTGTCACCCAGGCTGGAGTGC
